Parent's Observations of Social Interactions (POSI)

Scoring Directions, 12/14/15

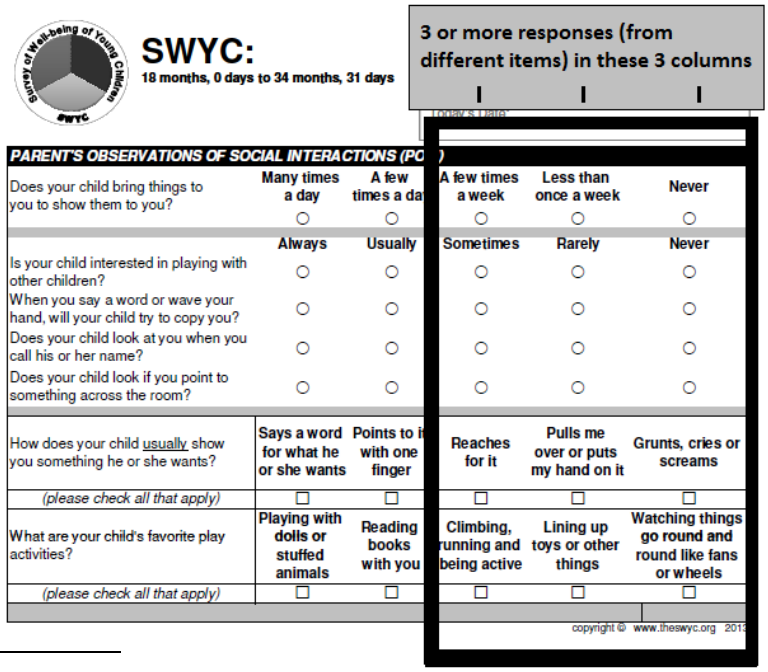

1. Score each of the seven questions. Each question is assigned either a "1" or a "0". If the parent selects one or more responses that fall in the last three columns, the question is scored as "1"; otherwise, it is scored as "0" (see image below).

2. For items where parents have selected multiple responses for a single question (i.e., multiple responses in each row):

    a. Choose the more concerning answer (i.e., lower-functioning behavior) farthest to the right.
    b. If the parent has selected multiple answers in the last three columns for one item, assign only one point for the item.
    c. Missing items count as zero.

3. Since there are seven questions total, there is a maximum of seven potential points.

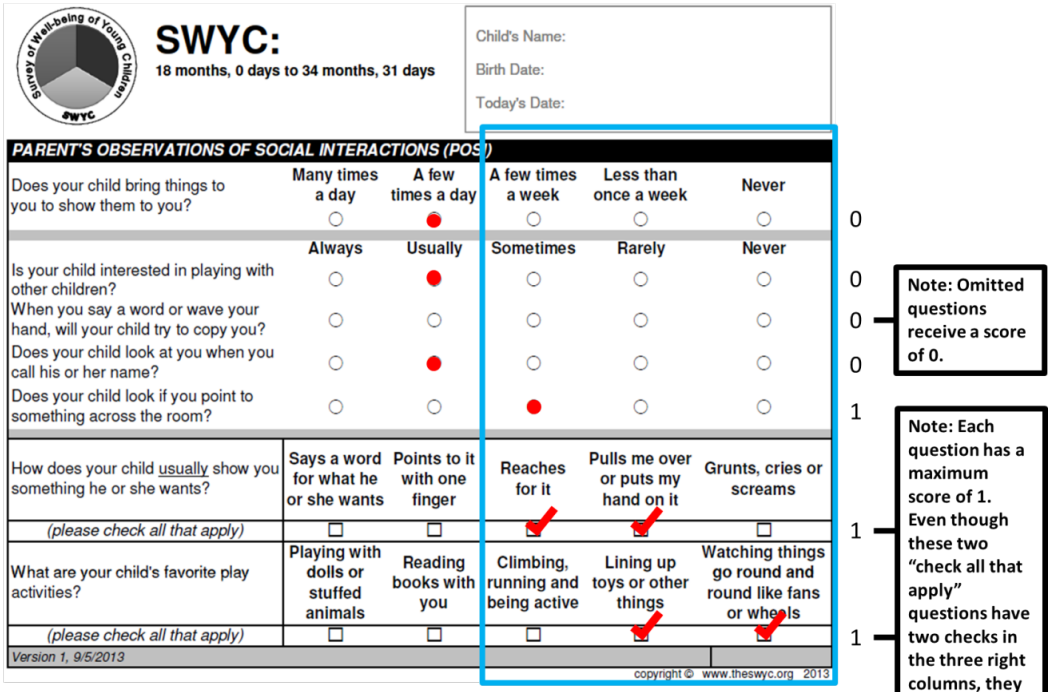

4. A result of three or more points in the last three columns indicates that a child is "at risk" and needs further evaluation or investigation.[1]

[1] Based on recent data, we are actively working to revise the *POSI* scoring system. Our goal is to maintain sensitivity while increasing positive predictive value.
